

Project Details

LingoDeck App

- **The Solution:** LingoDeck provides a modern Android-based flashcard application to optimise learning sessions.
- **Description:** A flashcard-based study app that helps users learn and review content efficiently using reviewing-cards and interactive swipe gestures. Users study one card at a time, flip to reveal answers, and swipe right for correct or left for incorrect, making review sessions fast and intuitive. The app tracks progress during each session, provides visual feedback (colours and animations), supports text-to-speech for pronunciation, and ends with a clear performance summary showing accuracy and results.
- **Team members:** Diana Simoncova & Tijana Mijatovic
